Art Unit: 1712

Applicant's election of Group I is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 11, 12 and 14-27 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the response filed November 20, 2003.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2 and 4-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blum or WO 97/25361. Blum and WO 97/25361 are believed to be equivalents. The references teach reactive prepolymeric organic compounds that have structures having abstractable hydrogens that include isoprenyl group and dicyclopentadiene that can be cured without free radical initiators. See Blum at col. 2, lines 2-60 (structures I through V_a). The reactive compounds can be used in combination with unsaturated polyesters in the form of solids that can be melted for use. See Blum at col. 3, lines 22-40 and col. 11, lines 17-18. The reactive compounds may carry photoinitiators to enhance photosensitivity. See Blum col. 10, line 64 through col. 11, line 3. As suggested by each of the references, it would have been obvious to combine a reactive prepolymeric organic compound having isoprenyl groups with an unsaturated polyester, where one of the components is optionally derived from dicyclopentadiene, in order to obtain a hot melt resin composition that can be cured without free radical initiators.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or

improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 2 and 4-8 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of copending Application No. 10/181134. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of this application and the claims of S.N. 10/181134 overlap.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
